- (c) In the event that the Work is totally or partially suspended, the Party that has caused the suspension (whether by reason of an act, omission or default) shall bear all the damages, costs and expenses caused by the suspension. If the suspension is not due to an act, omission or default of any of the Parties, and such delay falls under the definition of an Excusable Delay, then the deadlines of this Agreement will be extended for the same period of the suspension, or for such other period that the Parties deem reasonable in view of the circumstances, and District shall assume any costs arising under the effects of the suspension on the obligations of the Parties under this Agreement.

 - (v) All Environmental Incentives hereafter enacted into law, whether under federal, state or local law, arising from the Environmental Attributes of the System or the energy output or production, sale, purchase, consumption or use of the energy output from the System, expressly excluding, however, any future Environmental Incentives that are or may be dependent on ownership of the System for federal tax purposes.
- (c) The Carbon Credits, renewable energy credits, grants and future Environmental Incentives as described herein shall be referred to collectively as "Energy Credits". The Contractor may assign, sell, transfer or otherwise convey all or any part of its right, title, and interest in and to the Energy Credits from time to time as it may determine to be in its best interest. District shall take such steps as Contractor shall reasonably request to confirm Contractor's ownership of Energy Credits as herein provided and shall cooperate with Contractor, to the extent Contractor reasonably requests and at Contractor's expense, in the sale or other disposition of Energy Credits.
- (d) Independent Contractor. Contractor is acting hereunder as an independent contractor and not as an agent or employee of the District. The Contractor shall not represent or otherwise hold out

itself or any of its directors, officers, partners, employees, or agents to be an agent or employee of the District.

- (b) District shall bear the risk of loss and full responsibility with respect of the System from and after the date of Substantial Completion of the Work subject to the Work Order.
- (c) Notwithstanding anything herein to the contrary, District shall bear the risk of loss and full responsibility for the cost of replacing or repairing any damage to that portion of the System applicable to the Work Order and all materials, Equipment, supplies and maintenance equipment (including temporary materials, equipment and supplies) that are purchased by Contractor or District for permanent installation in or for use during construction of the System to the extent caused by the negligent, grossly negligent or willful acts of District or its agents, employees or representatives.
- (d) Title to all materials, Equipment, supplies and maintenance equipment required by this Agreement, to be purchased by Contractor for permanent installation as part of the System or for use by District or Project Owner in the operation of that portion of the System subject to the particular Work Order shall pass to the District upon the achievement of Substantial Completion of the Work required by that Work Order.

Within five (5) days after receipt of such notice, District shall either issue to Contractor the Certificate of Substantial Completion in a form similar to Exhibit F, or, if reasonable cause exists for doing so, advise Contractor by notice (stating the reasons therefore) that Substantial Completion has not been achieved. In the event District determines that Substantial Completion has not been achieved in accordance with the conditions precedent in Section 5.1(c), Contractor shall promptly take such action or perform such Work as is required to achieve Substantial Completion and shall thereupon issue to District another notice as set forth above. This procedure shall be repeated until such time as District has acknowledged Substantial Completion subject to Section 5.1(f).

- (e) All punchlist items shall be completed no later than sixty (60) Business Days after Substantial Completion Date unless otherwise delayed by the local utility. 1.0 BASIS OF ENERGY ENGINEERING

Forecasted energy savings are the difference between the pre- and post-retrofit period consumption for the equipment included in the scope of Work. The pre-retrofit (or Baseline) data for this project covers the period from July 2014 through June 2015. The Baseline data takes into consideration the quantity of facilities and size; 2014/2015 building operational schedules; 2014/2015 School Calendar and 2014/2015 individual school Bell Schedules; occupancy factors and utilization; utility usage, costs and utility rates along with the available average ASHRAE weather files for the closest weather station. Except weather files, all this data have been obtained from the CUSTOMER.

Since CONTRACTOR does not control/follow the building operations on a day-by-day basis, it is virtually impossible to track the energy consumption and savings from utility bills due to many dynamic factors that are out of the CONTRACTOR'S control. These factors (permanent or temporary) include, but are not limited to: weather changes; changes in the use of any facility and number of occupants (including, but not limited to, staff, faculty and students); changes to the hours of operation of any facility; changes to the control system scheduling; changes or modifications to the equipment or services provided under this Agreement; changes in utility suppliers, method of utility billing, number of days in the billing cycle, utility rates or method of utility purchasing; improper maintenance of the equipment or of any energy-consuming equipment; changes to the equipment or to any facility required by changes to building codes; additions or deletions of energy-consuming equipment; personal portable heaters; refrigerators and vending machines and/or additions or deletions of any facilities (i.e. portable classroom buildings), etc. It should be also noted, that the weather within last two years was unusually mild and, as a result, heating and cooling energy costs were lower than normal.

Therefore, engineering calculations approach is based on a measure-by-measure (ECM-by-ECM) basis and is to be derived by comparing the specific value of physical parameters after the installation to its value prior to the installations. For example: lighting systems retrofit (see

below) will result in lower wattage consumption than Baseline scenario. This measure is not affected by weather changes, HVAC or other unrelated equipment energy consumption that are reflected in the utility bills. Below are some key characteristics and features of the measure-by-measure energy saving calculations method:

- It calculates savings based on CUSTOMER inputs, field measurements, and agreed upon assumptions and stipulations.
- It does not involve utility bill comparisons; however, utility bills may be analyzed to identify energy consuming trends and correlations.
- It is structured so that the individual measure's savings, as described in Scope of Work, shall not be effected by unrelated building modifications.

Additionally, selected energy savings calculations have been performed with the help of the on-line Energy Saving Calculators developed by California Energy Commission (CEC). These on-line calculators are offered by CEC as a part of CA Clean Energy Jobs Act (Proposition 39). CONTRACTOR has no control over engineering methodologies utilized by CEC in on-line Energy Saving Calculators.

In any event, the overall energy use of the facility would be lower than if the energy saving measures (retrofits) identified in the facility solutions project herein had not been implemented.

If desired, the CONTRACTOR may provide additional utility data analysis and benchmarking based on the standard engineering principals for an additional fee (excluded from this Scope of Work). The CUSTOMER is to notify CONTRACTOR in writing no later than thirty (30) days after any changes as outlined above made to the Property that would affect the energy usage at the Property. The CUSTOMER shall make available to CONTRACTOR no later than thirty (30) days upon receipt, on a monthly basis for at least one year after Completion and Acceptance Date, copies of all energy bills, energy usage data, and any and all other such documentation related to changes to energy usage as outlined above.

2.0 GENERAL LIGHTING SCOPE OF WORK

Energy savings are realized due to the fact that the total input watts of the lighting fixtures will be reduced. Energy savings resulting from the Lighting System Retrofit have been estimated for each individual light fixture type based on the following simple formula:

$$\text{Annual Saving, \$} = \frac{(\text{Existing Watts} - \text{New Watts})}{1000} \times \text{Hours/Year} \times \text{Utility Rate} \times N$$

Where,

- Existing Watts* – Wattage rating for the existing (Baseline) light fixture
New Watts – New wattage rating for the existing light fixture
Hours/Year – Annual number of “burn-hours” (run hours for different areas as reported to CEC)
Utility Rate – Actual weighted composite utility rate, \$/kWh
N – Number of light fixtures of the particular type (see below for the actual quantities).

Currently the (1) site has a mixture of lighting technologies. Past modernization and retrofit projects included the upgrading of several sites with first generation electronic ballasts and T8 fluorescent lamps.

This project will provide a significant energy reduction while greatly improving the overall quality and quantity of light. All fixtures presently powered by electronic ballasts will be retrofitted with 4th generation electronic ballasts and High CRI extended performance T8 fluorescent lamps. In addition to the linear fluorescent fixture retrofits all incandescent lamps will be replaced with compact fluorescent lamps and or new compact fluorescent fixtures.

All discolored or broken lighting diffusers encountered during this project will be replaced as part of this project.

All incandescent or CFL exit signs included in this project will be retrofitted with new L.E.D. exit sign kits as applicable.

All incandescent exterior lighting included in this project will be replaced with compact fluorescent lamps, new compact fluorescent fixtures or L.E.D. fixtures or lamps as applicable.

All expended lighting lamps and ballasts will be disposed of per current EPA regulations. Any found lighting ballast containing PCB's will be treated as Hazardous waste and disposed of per EPA hazardous waste regulations.

Unless specifically requested by the CUSTOMER, the intent of lighting retrofit Work is not to increase the light levels but rather to maintain the existing or better lighting levels while maximize energy savings without re-designing the overall system. In some cases, where the areas are over illuminated (per Illumination Engineering Society recommendations), light levels may be reduced to the recommended levels.

Scope of Work presented herein is based on retrofits feasibility, cost effectiveness and maximum energy savings for the different options. The presented retrofits will not affect the usability of the buildings or facilities and therefore are not alterations, additions, new construction or modification of the existing systems. As a result, the scope of work is considered maintenance replacement of the existing outdated lighting system components with like-kind components of higher efficiency and longer useful life. Maintenance related items are not considered lighting alterations and are exempted from the code and Title 24 provisions. Due to the possibility of dissimilar interpretations of regulations, additional cost-incurring system upgrades may be requested. Upon the CUSTOMER requesting changes based on interpretations, the CONTACTOR will provide a written change order to the CUSTOMER for review and approval.

Below is the Itemized Scope of work below for specific retrofit strategies and fixture totals for each site:

To address ventilation requirements the fan is to be programmed in the "ON" mode. For better energy efficiency and to comply with Title-24 regulations CONTRACTOR assumes the following zone temperature settings to achieve 5° F dead band:

- 75° F – Minimum Occupied Cooling

- 70° F – Maximum Occupied Heating
- 95° F – Night/Unoccupied set back. Different set back cooling temperature can be established in critical areas per CUSTOMER'S request.

4.0 GENERAL HVAC SCOPE OF WORK

4.1 Basis of Design and Engineering

The intent of this project is to reduce the CUSTOMER'S utility costs and operational expenses by replacing the existing HVAC equipment with new high energy efficient units.

As requested, CONTRACTOR will be replacing the existing units listed below in Section 4.2 with new higher efficient equipment of equal capacity. These direct replacements are based on the assumption that the original units have been sized properly for the local weather conditions, current occupancy levels and space use. Unless specifically requested, it is not CONTRACTOR's intent to re-design or to modify these systems. Unless specified otherwise, it is CONTRACTOR's intent to maximally re-use the existing air distribution systems, rooftop units' platforms (if any), electrical, gas & condensate drain connections and other existing HVAC system components. It is assumed that that these system components to be re-used are in good operational order and no repairs are needed.

The new equipment, as identified below, is selected based on the energy efficiency and economic viability. These retrofits are like-for-like equipment replacements that are not structural in nature. As it has been reviewed by the licensed Structural Engineer (as required by Division of State Architect), no existing building structural elements will be affected by the replacement HVAC systems. According to State of California Division of State Architect Office of Regulation Service Policy #97-08, IR A-10 (Exemption from DSA Approval document, issued on 02/12/16), IR A-22 and applicable Sections 17280-17316 of the California Education Codes, this project falls into the categories of non-structural Work. This Work does not infringe on the Life Safety Systems, if any. The Work described herein is limited to HVAC systems replacement only. Therefore, approval from Department of State Architect is exempted for the in-kind HVAC replacements based on the considered herein reasons.

In the absence of the reliable as-built drawings, CONTRACTOR has made certain design engineering and estimating assumptions for all work prior to completion of the final engineering and construction. Though unanticipated, there may be some changes to the scope of work based on the unknown pre-existing conditions. Should they arise; a fair and equitable solution will be negotiated in good faith between the CUSTOMER and CONTRACTOR for any additional costs required.

CONTRACTOR will use the current 2013 Uniform Building Code (UBC), 2013 California Uniform Plumbing Code (UPC), 2013 California Uniform Mechanical Code (UMC), the National Electrical Code (NEC), Sheet Metal & Air Conditioning Contractors' National Association (SMACNA) standards.

4.2 Mechanical Scope of Work

The following lists in detail the mechanical Scope of Work to be performed for all unit replacements:

- Provide necessary rigging and trucking of new equipment to the project site.
- Provide and install new package and split unit systems as detailed below.
- Provide all sheetmetal as needed to connect new unit to existing opening.
- Furnish and install weather tight sealant on all seams, joints and connections to ensure full weather seal.
- Reconnect the gas and condensate lines to the new equipment with all materials as needed.
- Reconnect electrical service to all new equipment with new disconnects, as needed.
- CONTRACTOR's technicians will perform a complete start-up and test of new equipment to ensure proper system operation.
- Clean all areas daily as new work is completed.
